

Hospitalick

AI that gives clinicians their time back — **clinician-approved, measured from the first pilot.**

THE PROBLEM

Waiting lists grow, referrals bounce, clinicians drown in documentation and beds block — while AI arrives as demos and big-bang programmes that never survive contact with a real provider's systems, governance and pressures.

WHAT HOSPITALICK DOES

Scoped, **clinician-approved AI pilots** on the pressure that hurts most — built inside your organisation, against the EPR and systems you already have, by the engineering practice of **BiSkilled**. Success measures are agreed against a baseline before anything is built; what proves itself scales, what doesn't stops early.

HOW WE WORK

No price list, deliberately: each step is fixed-price and scoped first. A pilot is a working system in one service, in weeks — measured against the discovery baseline.

NON-NEGOTIABLES

AI proposes. People decide. In every scenario, on every patient-affecting step.

- clinician or trained staff approve every decision
- IG & clinical safety agreed before any build
- full audit trail of every AI-assisted action
- × no rip-and-replace — your systems stay

AI Triage Assistant

Consistent first-line triage, human-approved.

Referral Routing

Right referral, right clinic, first time.

Clinical Documentation Assistant

Notes written as care happens.

Discharge Summary Generation

Same-day summaries, safer handoffs.

Patient Communication Assistant

Answering patients without adding headcount.

Waiting-List Optimisation

Every slot used, every list honest.

Bed Management

Tomorrow's flow, visible today.

Clinical Knowledge Search

Your policies, one question away.

FOUNDATIONS

Human-in-the-loop by design

Information governance first

Audit-trailed

EPR-integrated

Baseline-measured

UK-dedicated

WHO'S BEHIND IT

Hospitalick is the healthcare practice of **BiSkilled** (biskilled.com) — forward-deployed AI engineering led by **Tal Shany**: hospital finance and operational systems, bank-grade data platforms, production AI. Delivered with the AgentDesk engine — documented as it's built.
